University of Westminster
School of Computer Science & Engineering

5COSC001W Coursework (Semester 1)	
Module leader	Guhanathan P
Unit	Coursework
Weighting:	50%
Qualifying mark	30%
Description	Coursework
Learning Outcomes Covered in this Assignment:	- LO1 Identify and justify good practices in the development of object oriented software - LO2 Apply acquired knowledge of concepts, characteristics, tools and environments to adapt to new computational environments and programming languages which are based on object oriented principles - LO3 Design, implement efficiently applications based on a OOP language, given a set of functional requirements. - LO4 Implement GUI interfaces using an OOP language
Handed Out:	6th Nov 2020
Due Date	4th Jan 2021 13:00
Expected deliverables	Java Source code and any Resources (images, etc)
Method of Submission:	Electronic submission on BB via a provided link close to the submission time. The file you upload should have the following naming format: wNNNNNNNN.zip and for Turnitin wNNNNNNNN.docx (where wNNNNNNN is your university ID login name)
Type of Feedback and Due Date:	Individual feedback via Blackboard within 14 working days of submission and mandatory viva voce will be held **All marks will remain provisional until formally agreed by an Assessment Board**

Assessment regulations

Refer to section 4 of the "How you study" guide for undergraduate students for a clarification of how you are assessed, penalties and late submissions, what constitutes plagiarism etc.

Penalty for Late Submission

If you submit your coursework late but within 24 hours or one working day of the specified deadline, 10 marks will be deducted from the final mark, as a penalty for late submission, except for work which obtains a mark in the range 40 – 49%, in which case the mark will be capped at the pass mark (40%). If you submit your coursework more than 24 hours or more than one working day after the specified deadline you will be given a mark of zero for the work in question unless a claim of Mitigating Circumstances has been submitted and accepted as valid.

It is recognised that on occasion, illness or a personal crisis can mean that you fail to submit a piece of work on time. In such cases you must inform the Campus Office in writing on a mitigating circumstances form, giving the reason for your late or non-submission. You must provide relevant documentary evidence with the form. This information will be reported to the relevant Assessment Board that will decide whether the mark of zero shall stand. For more detailed information regarding University Assessment Regulations, please refer to the following website :http://www.westminster.ac.uk/study/current-students/resources/academic-regulations

5COSC007C OBJECT ORIENTED PROGRAMMING - Assignment

Deadline 4th Jan 2021, 13:00

Guhanathan P
Email: P.Guhanathan@westminster.ac.uk

Description

Your task is to create an application using java which simulates the manipulation of a premier league championship.

Design and Implement a class PremierLeagueManager (for football https://en.wikipedia.org/wiki/Premier_League) which extends interface LeagueManager. The LeagueManager interface must be designed such that in the future it can be extended to maintain not only a number of football premier league but also academic clubs such as university sport club and school sport clubs (https://en.wikipedia.org/wiki/Professional_Development_League).

Design a solution:

The design of your system should be consistent with the Object Oriented principles and easy to understand by an independent programmer. You are required to design your program using UML diagrams. In particular you have to draw:

- class diagrams
- two or more use case diagrams for the system (one for the Console and one for GUI)

Problem description and requirement statement

The details for the implementation of the system are given in the steps below: It is important to follow exactly the specifications and your implementation must conform to these:

1. Design and implement a super class SportsClub that should include appropriate methods and hold information about the name of the club, its location and various statistics about the club and then create the sub class FootballClub, with appropriate attributes specific to each of them.

   For example when it comes to football should include statistics such as how many wins, draws and defeats an instance of it has achieved in the season, and the number of goals received and scored. The number of points that a club currently has, and the number of matches played should also be included.

Further sub classes for UniversityFootballClub (Under 23) and SchoolFootballClubs (Under 18)

2. Implement a class PremierLeagueManager which extends interface LeagueManager. The PremierLeagueManager class maintains a number of football clubs which play in the premier league.

   The class should create a menu based on command line interface based input (i.e. console and NOT graphical components) and give the user the choice of:

   - Create a new football club and add it in the premier league.
   - Delete (relegate) an existing club from the premier league.
   - Display the various statistics for a selected club.
   - Display the Premier League Table, i.e. display all the teams playing in the premier league and some of their statistics, in descending order, according to the points they have. Thus, the club which has the maximum number of points should be displayed first, the club being second in the league should be displayed next, etc. In the case which two clubs have the same number of points the club with the best goal difference should appear first.

   - Add a played match with its score and its date, so that the statistics of the two clubs involved and the premier league table are updated automatically.
   - Saving in a file of all the information entered by the user. **[Use of database is strictly prohibited]**
   - The next time the application starts it should read all the information saved in the previous file (resume/recover the previous state of the program) and continue its operation based on that with the user being able to enter new information or change the existing information.

3. Design and implement a graphical user interface (GUI) which is able to do the following:

   - Display the list (table) of all the teams and their statistics in descending order of points.
   - Give the user the possibility of sorting the previous table according to goals scored (descending order).
   - Give the user the possibility of sorting the previous table according to the largest number of wins (descending order).
   - Add a button which every time it is pressed it generates one random played match between two randomly chosen clubs (teams) and it automatically updates the premier league table by adding the match (points, score and other statistics). The score and chosen teams should be entirely random and not hardcoded in your source code. The button should generate a different match and a different score every time it is clicked. The user should be able to see the randomly generated match with the score (in addition to the table of standings), in order to be able to verify the correctness of your code for the updated information of the table.

- Add a button which displays all the played matches sorted in ascending order of date played (both randomly generated or manually entered using the text menu function-ality described above). This should display all the matches played, included matches inserted and generated in previous runs of the application (assuming that the user saved the information entered using the text menu functionality above).
- Add a button and a textbox which can be used to search for all matches played in a given date. The full details of the matches should be displayed (i.e. both club names and the score).

Use same data source [No database only file handling is allowed] that is used in Console application for GUI as well.

Marking will also be allocated for code quality such as:

- Code readability (structure, comments, variable naming, etc.)
- Implementation (e.g. quality, efficiency, etc.)

The maximum for work which does not compile is 30% (i.e. a mark in the range 1 to 30% will be awarded).

Submission of assignments using a different method other than Blackboard will not be accepted and zero (0) marks will be awarded in such cases.

Deadline: Tuesday 4th of Jan 2021, 13:00.

Mark Allocation:

Design using UML diagram	10
POJO Classes	5
LeagueManager	2
FootballLeagueManager and CLI	40
GUI	35
Code Quality	8

Submission Instructions

Files to submit: all your source code files (the files with extension .java files NOT the .class files). This should include test classes, i.e. classes which were implemented for the sole purpose of testing other classes (Unit test). You should NOT copy and paste your code into notepad, Word or other applications but simply submit in a zip file all your Java source, i.e. the files with extension .java for assignment submission. For Turnitin submission please copy the design and code into a word document and nicely format before uploading.

No IDE for console application BUT use of IDE is permitted for GUI part but DO NOT use any tools to generate code.

Referencing code: Any code taken from other resources (i.e. a textbook or internet) should be referenced in comments within your code (full textbook details or full web URL), identifying the exact code that you used it as part of your application and the exact portions of the original source code that you reused.

You should submit via BlackBoard's Assignment functionality (do NOT use email, as email submissions will be ignored.), all the files described above. A single zip file with the name wNNNNNNNN (where wNNNNNNN is your university ID login name) containing all the above files could be submitted alternatively. You can create such a file by using the main menu in Netbeans and choose File->Export Project->to Zip or use other tools in your operating system.

Note that Blackboard will allow to make a submission multiple times. Make sure before submitting (i.e. before pressing the Submit button), that all the files you want to submit are contained there (or in the zip file you submit).

In the case of more than one submissions, only your last submission before the deadline given to you will be marked, so make sure that all the files are included in the last submission attempt and the last attempt is before the coursework deadline.

Request to mark submissions which are earlier than the last submission before the given deadline will be ignored as it is your responsibility to make sure everything is included in your last submission.

The following describes how to submit your work via BlackBoard:

1. Access https://learning.westminster.ac.uk and login using your username and password (if either of those is not known to you, contact the IIT Registry, tel: +94768209765 (Ms. Lakshika)
2. Click on the module's name, MODULE: 5COSC007C.2020 OBJECT ORIENTED PROGRAMMING (IIT Sri Lanka) found under My Modules & Courses.
3. Click on the Assessment->Submit Coursework->Coursework.
4. Click on View Assignment.
5. Attach your zip file containing all the Java source code files, by using the Browse button and upload and submit to assignment submission
6. Create a Word or PDF file with the following information:

- Comments: Type your full name and your registration number, followed by:

  "I confirm that I understand what plagiarism / collusion / contract cheating is and have read and understood the section on Assessment Offences in the Essential Information for Students. The work that I have submitted is entirely my own. Any work from other authors is duly referenced and acknowledged."

- Copy and paste all the code you wrote for all the functionalities [make sure the code is formatted well after copying and pasting (No images for code which will result in ZERO)] and design diagram (Image is fine).

7. Attach the file with the statement above.
8. Click the upload button in the Turnitin and Submit.

If Blackboard is unavailable before the deadline you must email the Registry at com_submission@iit.ac.lk with cc: to myself and your personal tutor before the deadline with a copy of the assignment, following the naming, title and comments conventions as given above and stating the time that you tried to access Blackboard. You are still expected to submit your assignment via Blackboard within next 5 days and request me for a viva slot. Please keep checking Blackboard's availability at regular intervals up to and after the deadline for submission. You must submit your coursework through Blackboard as soon as you can after Blackboard becomes available again even if you have also emailed the coursework to the above recipients.

If you have finance hold please try to get it removed and submit within 5 days to BB and request for a viva slot from me in the event you cannot fix it in 5 days please submit a mitigation to registry immediately and do the assignment during refer/defer time.

Same regulations are applicable for viva voce too.
